New Custom Field

Product

Help on this Page

Step 1: Choose the field type

Specify the type of information that the custom field will contain.

Next Cancel

Data Type

☒ None Selected

Select one of the data types below.

- ☐ Auto Number
System-generated sequential number that uses a display format you define. The number is automatically incremented for each new record.
- ☐ Formula
A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.
- ☐ Multiple Picklist
A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.
- ☐ Lookup Relationship
Establish a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.
- ☐ Picklist
Establish a record type of record field relationship between the object the field is defined on (object A) and another object the record is related to (object B).

New Custom Field

Step 2: Choose output type

Field Label: **Unit Price** Field Name: **Unit_Price**

Add to existing report type: ☒ Add this field to existing custom report types that contain this entity.

Formula Return Type

☐ None Selected Select one of the data types below

☐ Checkbox Calculate a boolean value.
Example: $(ID140) > (LastDate)$

☒ Currency Calculate a dollar or other currency amount and automatically format the field as a currency amount.
Example: $(Gross Margin) * Amount / End_$

☐ Date Calculate a date, for example, by adding or subtracting days to other dates.

Order Item

Order Item Validation Rule

Define a validation rule by specifying an error condition and a corresponding error message. The error condition is written as a Boolean formula expression that returns true or false. When the formula expression returns true, the save will be blocked and the error message will be displayed. The user can correct the error and try again.

Validation Rule Edit

Rule Name:

Active: ☒

Description:

Quick Tip: [Create & Publish](#)

Error Condition Formula

Examples: `Discount_Percent < 0.30` [View Examples...](#)

Display an error if Discount is more than 30%

If this formula expression is true, display the text defined in the Error Message area
